

COPYRIGHT AND 3D PRINTING

3D printing can implicate all areas of intellectual property (IP) ownership and rights. The SFU Copyright Office provides these copyright guidelines for faculty, staff and students using 3D printers at SFU. Contact the Copyright Office (copy@sfu.ca) with any questions.

If you design your own 3D file, you own copyright in that design, as well as any associated drawings, plans and written descriptions of the design. You can then sell your files, license and share them freely (under a Creative Commons or similar license), or decide not to share them.

If you find 3D files online, make sure they are licensed for use (e.g. Creative Commons) or you have permission to use them (e.g. by buying the file). Not everything online is free to use. If you buy a file you can print the object, but you do not necessarily have permission to redistribute that file to others. Additionally, recreating an existing object by making your own 3D file from it could infringe the IP rights of that original object's creator.

If your project is collaborative, all co-creator(s) should set out an IP agreement in writing in advance.

Applicable SFU policies: *Intellectual Property* (R30.03); *Copyright Compliance and Administration* (R30.04)

A breach of copyright law (copyright infringement) can have serious legal and financial consequences for you and SFU.
