

Full Disk permission issue for NVIVO 12 Mac and still won't launch

Here are the steps:

FIRST quit the NVIVO 12.

SECONDLY, you need to give the Full Disk permission first to **BOTH** Terminal and NVIVO 12 in System Preferences - Security & Privacy.

(if you do not see the NVIVO 12 nor the Terminal, you can add manually by clicking the "+" button and look for the NVIVO 12 app (in Application folder) and Terminal (in Utility folder), make sure they are **checked**).

- Then after that launch the Terminal, then copy paste the "`touch ~$USER/Library/Safari/CloudTabs.db`" (without the quotes)
- then press **ENTER**.

like this:

- If it returns nothing (after pressing Enter) .. then it is good!
- **FINALLY**.. launch the NVIVO 12. it should work
