Geospatial discovery using FRDR Map Search

In this presentation:

- Update on FRDR Map Search - powered by Geodisy
- Introduction to the FRDR Discovery Redesign Project

The FRDR Discovery Service

Find Data

Search FRDR to find research datasets originating from researchers affiliated with Canadian institutions. Data deposited to other repositories across Canada can also be found by searching in FRDR. View the growing [list of collaborating repositories](#).

[Learn more »](#)

Deposit Data

Any researcher affiliated with a Canadian institution can deposit data into FRDR. The platform can efficiently ingest datasets of any size, and preservation processing is done automatically. Data professionals from the Portage Network and institutions across Canada work with researchers to curate and approve deposited items.

<https://www.frdr-dfdr.ca/>

FRDR Map Search is a discovery tool that allows users to find FRDR indexed datasets visually, spatially, and quickly

- An adaptation of the open source [Geodisy](#) project
- Search results are driven by an interactive map
- Directly tied to FRDR's research data indexing
- Contains datasets that are geospatial in nature or simply associated with a location

FRDR Map Search (re-)uses four main open-source software components

Geodisy: Metadata and data retrieval and processing

+

GDAL: Geospatial file processing

+

GeoServer: Server for publishing and distributing geospatial data

+

GeoBlacklight: Geospatial discovery layer

New in FRDR Map Search: French Translation

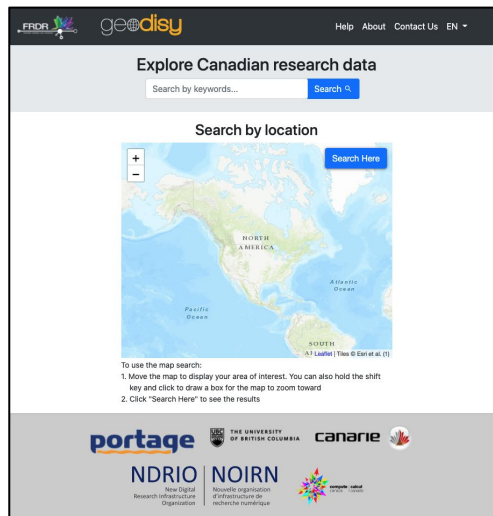

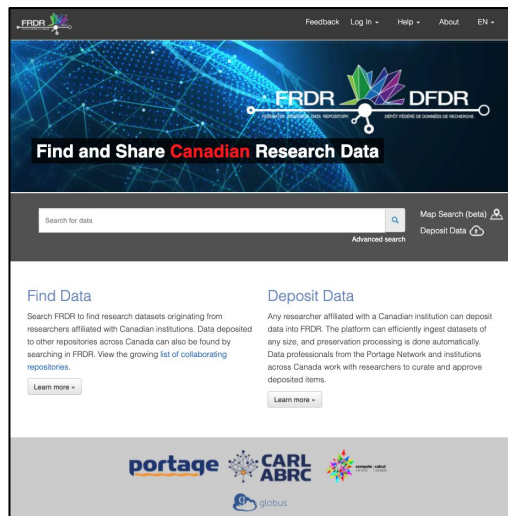

- FRDR Map Search is now available in French
- This includes the entire interface, along with user guides and support documents
- The translation is also being provided to the open source software GeoBlacklight as a means to pay back the support from this community

New in FRDR Map Search: FRDR Harvester

Connected to FRDR harvester

- Results in expanded number of harvested repositories - more records (CKAN, Socrata, etc)
- Improved backup system to decrease downtime in cases of system failures

The FRDR Discovery Redesign Project

Redesign Project: Goals

The FRDR Discovery Service Redesign project seeks to **overhaul the existing FRDR interface to meet evolving user needs.**

- Integrate the existing FRDR Discovery Service platform with FRDR Map Search, ensuring a seamless experience that combines text- and map-based searching for users
- Expand the capabilities of FRDR's search, through mechanisms including filters and advanced search
- Build a foundation upon which FRDR can better leverage persistent identifiers and controlled vocabularies, including ORCID, ROR, and FAST
- Respond to diverse community needs for discovery of Canadian research data

Redesign Project: Process

Completed:

- Environmental scan
- Established working group
- User research - including in-progress user survey (go to frdr-dfdr.ca if you would like to fill it out!)
- Initial prototype development
- Initial usability testing
 - We're looking for more participants! Submit your interest here: [FRDR User Testing //](#)
[L'essai par les utilisateurs du DFDR](#)

Redesign Project: Process

In progress:

- Design modules with working group
 - Module 1: Record pages
 - Module 2: Search results page
 - Module 3: Home search, browse page, & repo list
 - Module 4: Filters and metadata display
 - Module 5: Linking and enriching research data
 - Module 6: Keyword and map search functionality/algorithm
 - Module 7: API functionality
 - Module 8: Analytics
- Development work for alpha version, which will be used for further usability testing

The FRDR Discovery Redesign Project

We're interested in hearing from you! What map-based features would you like to see prioritized in a redesigned FRDR discovery interface?

Go to <https://www.menti.com> and enter code **6024 9659**

Or use this link: <https://www.menti.com/go4w6cmqz2>

Some examples...

Search by place name

Move map here

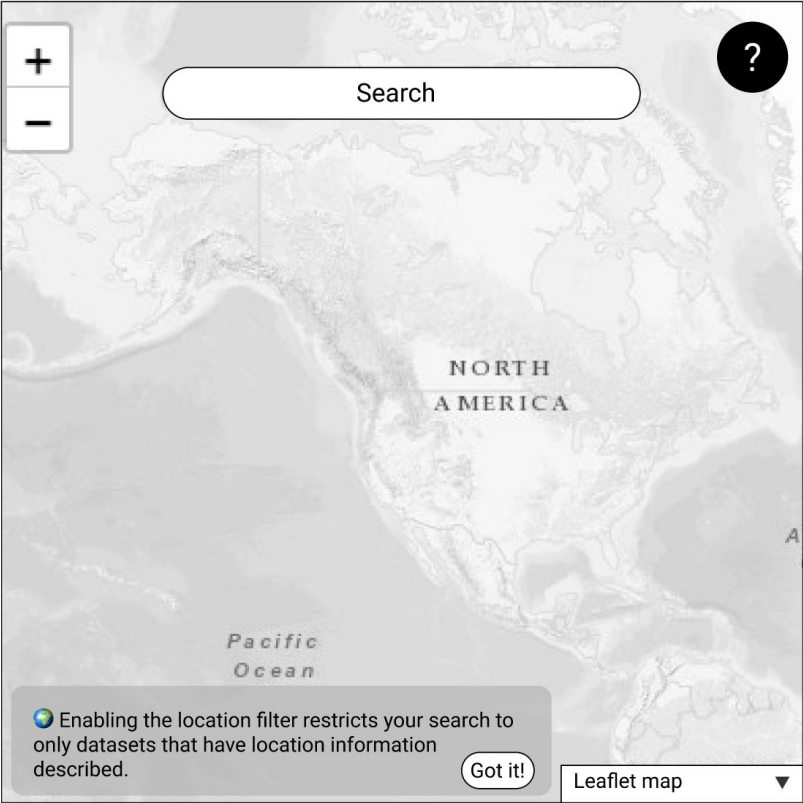

+

-

Search

?

 Enabling the location filter restricts your search to only datasets that have location information described.

Got it!

Leaflet map ▼

Clustering to preview dataset locations

Big Ten Geoportal: <https://geo.btaa.org>

The FRDR Discovery Redesign Project

What features would you like to see prioritized in a redesigned FRDR map search?

- **Search by place name**
- **Clustering** to preview dataset locations
- Links to **related publications** in other repositories
- **Metadata export** (eg. ISO 19139, DDI, DC)
- Something else?

Go to <https://www.menti.com> and enter code **6024 9659**

Or use this link: <https://www.menti.com/go4w6cmqz2>

Thanks! Questions?
