

**Extreme Weather Events Survey**  
**Ecologies of Harm: Mapping Contexts of Vulnerability in the Time of Covid-19**  
**The University of British Columbia**

COVID-19 presents the potential for people and groups who are already 'vulnerable' to become exposed to harm in new ways. We are concerned about the overlapping ways in which these harms may be occurring and we've designed a survey for descriptions of extreme weather events and experiences that are affecting people across the world as we also experience the pandemic.

This is a citizen / community observation survey, open to anyone **18 years of age and older** who wishes to contribute. Your descriptions will upload directly to an interactive **map of the world that is publicly accessible on this website: <https://blogs.ubc.ca/ecologiesofharmproject>**

Your participation is entirely voluntary, and you do not have to answer every question. If you do wish to participate, you do not need to record your name. You may contribute as many observations as you like!
